Librotein kinase (EC 2.71.-) - chicken
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Saccession: JP0079
B;Ochashi, K.; Toshima, J.; Tajinda, K.; Nakamura, T.; Mizuno, K.
C;Accession: JP0079
B;Othashi, K.; Toshima, J.; Tajinda, K.; Nakamura, T.; Mizuno, K.
J. Biochem. 116, 636-642, 1994
A;Title: Molecular cloning of a chicken lung cDNA encoding a novel protein kinase with N
A;Reference number: JP0079
A;Molecule type: mRNA
A;Residues: 1-642 coHA.
A;Residues: 1-642 coHA.
A;Residues: 1-642 coHA.
A;Coss-references: DDBJ:D26310; NID:g1402513; PIDN:BAA05372.1; PID:g643086
C;Comment: This protein kinase; LIM metal-binding repeat homology; protein kinase homology clim:
C;Reywords: ATP; duplication; phosphotranisferase; serine/threonine/tyrosine-specific pro;
F;72-124/Domain: LIM metal-binding repeat homology clim:
F;32-608/Domain: LIM metal-binding repeat homology clim:
F;32-608/Domain: Drotein kinase ATP-binding motif
F;496-506/Region: protein kinase ATP-binding motif
A;Residues: 1-466 <KUR>

Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
```

Isoid=Q9UHB6-3; Sequence=vSP\_003117;
Note=No experimental confirmation available;
NotesPECIFICITY: Highly expressed in placenta, kidney,
pancreas, prostate, ovary, spleen and heat. Also detected in
lung, liver, brain, skeletal muscle, thymus, testis and intestine.
Not detected in leukocytes. Eplin-beta levels are generally very low. Eplin-alpha is abundant in epithelial cells from mammary gland, prostate and in normal oral keratinocytes. Levels are low in acutic endothelial cells and dermal fibroblasts, and not IsoId=09UHB6-2; Sequence=VSP\_003116; IsoId=Q9UHB6-1; Sequence=Displayed; isoforms; Name=Alpha; Name=Beta;

detectable in myocardium.

Thourston: Down-regulated in some cancer cell lines. Eplin-alpha is induced by serum. Eplin-beta is constitutively expressed.

SIMILARITY: Contains I LiM zinc-binding domain.

CAUTION: Ref. 4 (BAA91120) sequence differs from that shown due to a frameshift in position 697.

CAUTION: Ref. 6 sequence differs from that shown due to captilons 365 and 662.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Name=Alpha;
IsoId=OBERG0-2; Sequence=VSP_003118;
IsoId=OBERG0-2; Sequence=VSP_003118;
IsoId=OBERG0-2; Eplin-alpha is highly expressed in embryos from day 7-11 and in adult spleen and lung. Eplin-beta expression is highest in adult kidney, testis, lung and liver, intermediate in heart, brain, spleen, skeletal muscle and low in embryos.
-!- SIMILARITY: Contains 1 LIM zinc-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mus musculus (Mouse).

Proc. Natl. Acad. Sci. U.S.A. 98:9883-9888(2001).
-!- FUNCTION: Converts seryl-tRNA(Sec UCA) to selenocysteinyl-tRNA(Sec UCA) during selenoprotein biosynthesis (By similarity).
-!- CATALVITC ACTIVITY: L-seryl-tRNA(Sec) + selenophosphate = L-
selenocysteinyl-tRNA(Sec) + phosphate.
-!- COFACTOR: Pyridoxal phosphate (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: BELONGS TO THE SELA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

-!- FUNCTION: DNA GYRAGE NECATIVELY SUPERCOILS CLOSED CIRCULAR DOUBLE-STRANDED DNA IN AN ATP-LEPENDENT MANNER AND ALSO CATALYZES THE INTERCONVERSION OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED DNA RINGS, INCLUDING CATENARES AND KNOTTED RINGS.
-!- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                   Deckert G., Warren P.V., Gasterland T., Young W.G., Lenox A.L., Graham D.E., Overbeek R., Snead M.A., Keller M., Aujay M., Huber Feldman R.A., Short J.M., Olson G.J., Swanson R.V., "The complete genome of the hyperthermophilic bacterium Aquifex

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions, Sequences that are not
                                                                                                                                                                 Worley,K.C.
